ABSTRACTED-PUB-NO: KR2001108689A

BASIC-ABSTRACT:

NOVELTY - A messenger service method using client-server environment and an electronic commerce method using the same are provided to prevent a server from being shut down due to connection congestion and to increase the efficiency of connection by embodying a chatting server as a messenger server to one of the participants.

DETAILED DESCRIPTION - A user accesses a messenger server and executes user registration(S2). Then, the user accesses a chatting room(S4). The user selects whether he will participate in an existing chatting room or make a new chatting room(S6). In case that the user wants to make a new chatting room, the messenger server asks him whether he wants to be a room leader(S8). If the user enters yes, a messenger program that a room leader server should have is downloaded from the messenger server(S10). And the user is registered as the room leader of the messenger server(S12).
